“My first contact with EBM; very useful beginning.”

“Clarified a number of issues, motivated to learn more!”

Finding and applying the best research evidence
to improve your patient care

Evidence-based medicine is the process of life-long, self-directed learning in which caring for patients leads to the search for, critical appraisal, and incorporation into practice of valid and clinically important information about diagnosis, prognosis, therapy, and other clinical and health-care issues.

The Oxford Centre for Evidence-Based Medicine was established by David Sackett and his colleagues in 1994 to promote the teaching, learning and practice of evidence-based health care, and to conduct research aimed at generating the new knowledge required for the practice of evidence-based medicine. The current Director is Professor Paul Glasziou.

The workshop is intended to serve as an introduction to evidence-based medicine. It is aimed at clinicians and other health care professionals who wish to gain knowledge of critical appraisal and experience in the *practice* of evidence-based health care.

You should consider attending if you:

- have a belief in the process of small-group learning,
- wish to learn how to practice EBM
- are committed to patient-centred learning.

After the workshop, participants should be able to:

1. formulate an answerable question
2. track down the best evidence
3. do rapid critical appraisal of controlled trials
4. apply the evidence to individuals' care
5. evaluate the effectiveness and efficiency of your educational process.

The Workshop is a mixture of plenaries and small groups in which participants will practice and develop their EBM knowledge and skills. Time will be provided for searching.

Participants will receive a copy of The Evidence-Based Medicine Workbook (Glasziou, Del Mar and Salisbury BMJ Books 2007) and materials to enable them to achieve the objectives of the one-day Workshop

The Workshop will be chaired by Dr. Carl Heneghan, Deputy Director of the Centre for Evidence-Based Medicine.
