## Groups will be required to:

- Prepare a 15 minute presentation together –
- Discuss at least one relevant clinical question
  - Demonstrate searches for evidence to answer this question
  - Summaries any findings; demonstrate clinical appraisal skills where possible
  - Form a justifiable judgement as to whether findings will influence patient care

The topics can be chosen on any medical or surgical area.

The key is to demonstrate how you have used your EBM teaching to ask, acquire, appraise and apply the evidence.

Consider based on your learning this week what steps will you take when you leave the workshop to instill an evidence-based culture in your setting
